expanded polystyrene mouldings

James Hutton

James Hutton (pressings) limited is
a company committed to quality and
to providing a first class service at
competitive prices

(pressings) Ltd

Quality presswork is produced in all
metals including mild steel, stainless
steel, aluminium, brass and copper.

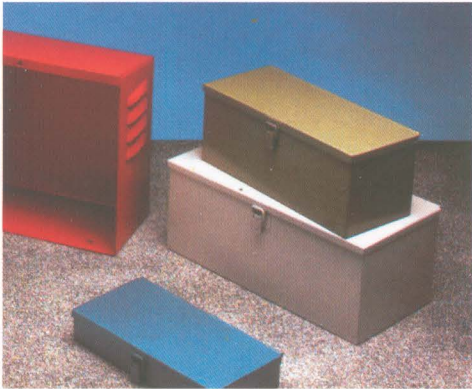

Pressed and welded assemblies are
supplied for a wide variety of
applications in motor vehicles and
electrical goods as well as numerous
other industries.

Tooling for both Pressings
and Expanded Polystyrene Mouldings
is produced in our own well
equipped toolroom.

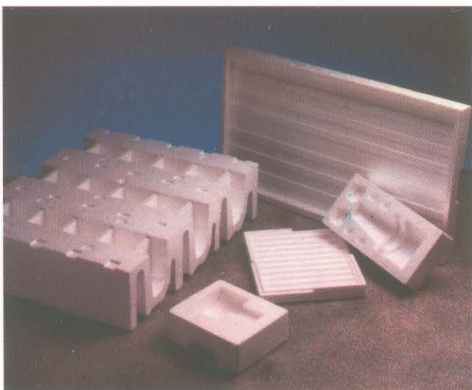

A standard range of hinged lid steel boxes are manufactured, but any size can be made up to 400mm x 400mm x 400mm using the same format.

Expanded polystyrene mouldings for packaging are produced up to a maximum size of 1000mm x 695mm. The mouldings offer superb protection for your goods in transit, as well as being extremely cost effective over other types of packaging. The mouldings can be made to customer specifications, or designed by James Hutton (pressings) limited.

A standard range of expanded polystyrene mouldings is available which can be adapted for your product for a very modest tooling charge.
